

RESEARCH STUDY

LANGUAGE & COGNITION IN DOWN SYNDROME

WE ARE RECRUITING VOLUNTEERS

for a study of language and cognition
in adults and young people
with Down Syndrome.

WHY THIS STUDY?

People with Down Syndrome may show **changes to their cognitive skills** as they get older. We are interested in finding out more about **how language is affected by these changes**.

Learning about the relationship between age, cognition and language will help us **develop better support** for people with Down Syndrome across their adult life.

WHAT IS INVOLVED?

Participants with Down syndrome complete a series of activities with the researcher over two sittings (30 mins each) and parents/carers answer some questions about the participant (45 mins).

Activities are completed over **video call**.

We offer
**£10 vouchers to
each participant and
each parent/carer
taking part!**

TAKE PART!

Who can take part:

- people with Down Syndrome
- aged 15 years or older
- their parent/caregiver
